Git Heading

1. Git is version control system used to track changes to files and coordinating changes between team members.
2. $cd fake/
   $git add changes.txt
   $git commit changes.txt
   $git push
3. A) Untracked- This refers to all files that are in the current directory and not staged.
   B) Staged- Refers to all files that are ready to be commited and are included in the next commit
   C) Committed - Refers to the process when files have been pushed to the git repo and are ready to be pulled by other collaborators.
